ADVANCED SOLUTIONS

TIRZEPATIDE

DUAL GLP-1 AND GIP AGONIST

Tirzepatide is an innovation in the treatment of type 2 diabetes and obesity, combining two mechanisms for superior results in metabolic control and weight reduction.

ADVANCED GLYCEMIC CONTROL

Significantly reduces HbA1c and stabilizes fasting and postprandial blood glucose.

POTENT WEIGHT LOSS

Decreases appetite, increases satiety, and promotes significant weight reduction.

BROAD METABOLIC IMPROVEMENT

Contributes to reduction of liver fat, blood pressure, and improvement of lipid profile.

RESEARCH USE ONLY

The administration of this product is not recommended without evaluation and guidance from a qualified healthcare professional.

OVERVIEW

Tirzepatide is a novel, dual glucose-dependent insulinotropic polypeptide (GIP) and glucagon-like peptide-1 (GLP-1) receptor agonist. By activating both receptors, it enhances insulin secretion, suppresses glucagon, slows gastric emptying, and reduces appetite, leading to superior glycemic control and substantial weight loss.

BENEFITS

- **Advanced glycemic control:** Significantly reduces HbA1c and stabilizes fasting and postprandial blood glucose.
- **Potent weight loss:** Decreases appetite, increases satiety, and promotes significant weight reduction.
- **Broad metabolic improvement:** Contributes to reduction of liver fat, blood pressure, and improvement of lipid profile.

POSSIBLE ADVERSE EFFECTS

- Nausea, vomiting, diarrhea, or constipation, usually transient.
- Risk of hypoglycemia when combined with other antidiabetics.
- Rare: pancreatitis, gallbladder alterations.
- Contraindicated in individuals with a history of medullary thyroid carcinoma or MEN 2.

ADVANCED SOLUTIONS

RETATRUTIDE

TRIPLE GLP-1 • GIP • GLUCAGON AGONIST

Retatrutide is a triple agonist in development that combines GLP-1, GIP, and Glucagon, offering a potential breakthrough in the treatment of obesity and type 2 diabetes. Initial studies show superior results compared to current drugs in the class.

EXCEPTIONAL WEIGHT LOSS

Average reductions of 24% to 26% and significant improvement in body composition.

ADVANCED GLYCEMIC CONTROL

Superior reduction of HbA1c, fasting glucose and postprandial glucose levels.

BROAD METABOLIC IMPROVEMENTS

Reduces liver fat, improves lipid profile, blood pressure and insulin sensitivity.

RESEARCH USE ONLY

The administration of this product is not recommended without evaluation and guidance from a qualified healthcare professional.

OVERVIEW

Retatrutide is a next-generation triple agonist that targets three key receptors: GLP-1, GIP and Glucagon. This unique mechanism acts on multiple pathways involved in appetite regulation, glucose metabolism and energy expenditure, delivering unprecedented results in weight loss and metabolic health.

BENEFITS

- **Exceptional weight loss:** Average reductions of 24% to 26% and significant improvement in body composition.
- **Advanced glycemic control:** Superior reduction of HbA1c, fasting glucose and postprandial glucose levels.
- **Broad metabolic improvements:** Reduces liver fat, improves lipid profile, blood pressure and insulin sensitivity.
- **Improved cardiovascular markers:** Reduces triglycerides and inflammatory markers.

POSSIBLE ADVERSE EFFECTS

- Nausea, vomiting, diarrhea, or constipation, usually transient.
- Risk of hypoglycemia when combined with other antidiabetics.
- Rare: pancreatitis, gallbladder alterations.
- Contraindicated in individuals with a history of medullary thyroid carcinoma or MEN 2.

ADVANCED SOLUTIONS

NAD 500

CELLULAR AGE VITALITY

NAD⁺ (Nicotinamide Adenine Dinucleotide) is a critical coenzyme found in every cell, essential for energy production, DNA repair, and metabolic regulation. NAD⁺ levels naturally decline with age.

- **METABOLIC HEALTH**
Supports mitochondrial function and cellular energy production.
- **CELLULAR ANTI-AGING**
Promotes DNA repair and activates longevity pathways (sirtuins).
- **CELLULAR AGE VITALITY**
Enhances overall cellular function, vitality and well-being.

 **RESEARCH USE ONLY**

The administration of this product is not recommended without evaluation and guidance from a qualified healthcare professional.

OVERVIEW

NAD⁺ is a vital coenzyme involved in hundreds of biochemical reactions in the body, including energy metabolism, DNA repair, and gene expression. By supporting mitochondrial function and activating sirtuins, NAD⁺ helps promote cellular health, longevity and improved physical and mental performance.

BENEFITS

- **Metabolic health:** Supports mitochondrial function and cellular energy production.
- **Cellular anti-aging:** Promotes DNA repair and activates longevity pathways (sirtuins).
- **Cellular age vitality:** Enhances overall cellular function, vitality and well-being.

POSSIBLE ADVERSE EFFECTS

- Mild: Headache, fatigue, nausea or flushing.
- Possible injection site reactions.
- High doses: Liver enzyme elevation or gastrointestinal discomfort (rare).
- Contraindicated in individuals with uncontrolled liver disease or severe active malignancies.

ADVANCED SOLUTIONS

SERMORELIN

10MG

Sermorelin is a synthetic peptide that stimulates the natural production of growth hormone (GH) by activating the release of GHRH (Growth Hormone Releasing Hormone) in the pituitary gland.

- **NATURAL GH PRODUCTION**
Stimulates the body's own production of growth hormone in a physiological way.
- **GENERAL VITALITY**
Improves energy, well-being, mood and quality of life.
- **MUSCLE REPAIR & RECOVERY**
Supports lean muscle maintenance and post-exercise recovery.
- **BONE DENSITY**
Contributes to stronger bones and skeletal health.

 **RESEARCH USE ONLY**

The administration of this product is not recommended without evaluation and guidance from a qualified healthcare professional.

OVERVIEW

Sermorelin is a growth hormone-releasing hormone (GHRH) analog that stimulates the pituitary gland to release growth hormone naturally. It helps improve body composition, recovery, sleep quality, and overall wellness without significantly affecting cortisol or prolactin levels.

BENEFITS

- **Natural GH production:** Stimulates physiological release of growth hormone.
- **General vitality:** Enhances energy, mood and quality of life.
- **Muscle repair & recovery:** Supports lean muscle maintenance and post-exercise recovery.
- **Bone density:** Contributes to bone strength and skeletal health.

POSSIBLE ADVERSE EFFECTS

- Mild headache, flushing, or dizziness.
- Nausea or gastrointestinal discomfort.
- Temporary fatigue or joint/muscle discomfort.
- Rare allergic reactions at the injection site.
- Should be used under medical supervision, especially in individuals with hormone-sensitive conditions.

ADVANCED SOLUTIONS

IPAMORELIN

10MG

Ipamorelin is a selective growth hormone secretagogue (GHS) that stimulates the release of growth hormone in a physiological and sustained manner, with minimal impact on cortisol and prolactin levels.

-  **INCREASES MUSCLE MASS**
Promotes lean muscle gain and improves body composition.
-  **FAT REDUCTION**
Supports fat burning and improves metabolic efficiency.
-  **ENERGY & METABOLISM**
Enhances energy levels and optimizes recovery.
-  **ANTI-AGING SUPPORT**
Improves skin, sleep quality and overall well-being.

 **RESEARCH USE ONLY**

OVERVIEW

Ipamorelin is a growth hormone secretagogue that acts on ghrelin receptors in the pituitary gland to stimulate the natural release of growth hormone. It is known for its high selectivity, low side effect profile, and minimal impact on cortisol and prolactin, making it ideal for long-term use.

BENEFITS

- **Increases muscle mass:** Promotes lean muscle gain and strength.
- **Fat reduction:** Enhances lipolysis and improves body composition.
- **Energy & metabolism:** Supports energy levels and recovery.
- **Anti-aging support:** Improves skin elasticity and sleep quality.

POSSIBLE ADVERSE EFFECTS

- Mild irritation or redness at the injection site.
- Headache or dizziness (rare).
- Fluid retention.
- Nausea or mild gastrointestinal discomfort (rare).
- Should be used under medical supervision.

The administration of this product is not recommended without evaluation and guidance from a qualified healthcare professional.

ADVANCED SOLUTIONS

TESAMORELIN

GHRH ANALOG PEPTIDE

Tesamorelin is a synthetic analog of Growth Hormone Releasing Hormone (GHRH) developed to stimulate the pituitary gland to increase endogenous growth hormone (GH) secretion. It is FDA-approved for the reduction of excess abdominal fat in HIV-infected patients with lipodystrophy and has been widely studied for its benefits in body composition, metabolism, and overall health.

-  **REDUCES VISCERAL FAT**
Clinically proven to significantly reduce excess abdominal (visceral) fat.
-  **NATURALLY BOOSTS GH**
Stimulates the body's natural production of growth hormone.
-  **IMPROVES BODY COMPOSITION**
Helps increase lean muscle mass while reducing fat mass.
-  **SUPPORTS METABOLIC HEALTH**
May improve lipid profile, insulin sensitivity, and overall metabolic function.
-  **ENHANCES RECOVERY & WELL-BEING**
Supports recovery, vitality, and quality of life by optimizing GH levels.

 **RESEARCH USE ONLY**

The administration of this product is not recommended without evaluation and guidance from a qualified healthcare professional.

OVERVIEW

Tesamorelin works by mimicking the action of GHRH, stimulating the pituitary gland to release more growth hormone (GH), which in turn increases IGF-1 levels. It is particularly beneficial for individuals with excess visceral fat, metabolic dysfunction, and those seeking to improve body composition and overall health.

BENEFITS

- **Reduces visceral fat:** Clinically shown to reduce excess abdominal fat.
- **Naturally boosts GH:** Enhances the body's endogenous GH secretion.
- **Improves body composition:** Increases lean mass while reducing fat.
- **Supports metabolic health:** May improve cholesterol, triglycerides, and insulin sensitivity.
- **Enhances recovery & well-being:** Promotes vitality, sleep quality, and overall quality of life.

POSSIBLE ADVERSE EFFECTS

- Injection site reaction: Redness, pain, or irritation.
- Headache.
- Nausea.
- Dizziness.
- Fluid retention (rare).
- Should be used under medical supervision.

ADVANCED SOLUTIONS

HGH

HUMAN GROWTH HORMONE

HGH (Human Growth Hormone) is a naturally occurring peptide hormone produced by the pituitary gland. It plays a critical role in growth, cellular regeneration, metabolism, and overall well-being. Our recombinant HGH is bioidentical to naturally occurring human growth hormone and manufactured to the highest standards of purity and potency.

-  **PROMOTES GROWTH & RECOVERY**
Stimulates tissue growth and repair, accelerates recovery after exercise or injury.
-  **INCREASES LEAN MUSCLE MASS**
Supports protein synthesis and helps increase lean body mass.
-  **ENHANCES FAT METABOLISM**
Promotes lipolysis and helps reduce body fat, especially visceral fat.
-  **IMPROVES BONE DENSITY**
Supports bone growth and helps maintain bone strength.
-  **IMPROVES OVERALL WELL-BEING**
Enhances sleep quality, energy, skin health, and overall quality of life.

 **RESEARCH USE ONLY**

The administration of this product is not recommended without evaluation and guidance from a qualified healthcare professional.

OVERVIEW

HGH is essential for growth, tissue repair, and metabolic regulation. It supports muscle development, fat metabolism, bone health, and organ function. HGH levels naturally decline with age, which can lead to reduced energy, muscle loss, increased body fat, and slower recovery. Supplementation may help restore these functions and improve overall health and performance.

BENEFITS

- **Promotes growth & recovery:** Accelerates tissue repair and healing.
- **Increases lean muscle mass:** Enhances protein synthesis.
- **Enhances fat metabolism:** Helps reduce body fat.
- **Improves bone density:** Supports bone growth and strength.
- **Improves overall well-being:** Enhances sleep, energy, and vitality.

POSSIBLE ADVERSE EFFECTS

- Joint or muscle pain.
- Edema (fluid retention).
- Carpal tunnel syndrome (rare).
- Insulin resistance or changes in blood sugar.
- Headache or fatigue.
- Should be used under medical supervision.

ADVANCED SOLUTIONS

FRAG

FRAGMENT 176-191

FRAG 176-191 is a synthetic peptide derived from a specific fragment of the human Growth Hormone (GH) molecule. It has been shown to stimulate the secretion of endogenous growth hormone (GH) and IGF-1, supporting muscle growth, fat loss, recovery, and overall physical performance.

-  **STIMULATES GH & IGF-1 RELEASE**
Promotes the body's natural production of growth hormone and IGF-1.
-  **SUPPORTS MUSCLE GROWTH**
Enhances protein synthesis and supports lean muscle development.
-  **AIDS FAT LOSS**
May help reduce body fat by increasing lipolysis and improving metabolism.
-  **ENHANCES RECOVERY**
Supports faster recovery after intense training and reduces downtime.
-  **IMPROVES OVERALL PERFORMANCE**
Supports strength, endurance, and physical performance.

 **RESEARCH USE ONLY**

 **OVERVIEW**
FRAG 176-191 is a powerful peptide fragment that works by stimulating the pituitary to release more growth hormone, leading to increased IGF-1 levels. This helps support muscle growth, fat metabolism, recovery, and athletic performance. It is a popular alternative for those seeking the benefits of GH without exogenous hormone use.

 **BENEFITS**

- **Stimulates GH & IGF-1 release:** Increases natural hormone production.
- **Supports muscle growth:** Enhances lean mass and strength.
- **Aids fat loss:** Promotes fat metabolism and lipolysis.
- **Enhances recovery:** Reduces recovery time and muscle soreness.
- **Improves performance:** Supports endurance, strength, and vitality.

 **POSSIBLE ADVERSE EFFECTS**

- Injection site reaction: Redness, pain, or irritation.
- Headache or dizziness (rare).
- Nausea.
- Joint or muscle discomfort.
- Should be used under medical supervision.

 The administration of this product is not recommended without evaluation and guidance from a qualified healthcare professional.

ADVANCED SOLUTIONS

BPC-157

BODY PROTECTING COMPOUND

BPC-157 is a stable gastric pentadecapeptide derived from a protein found in the human stomach. It has been extensively studied for its ability to accelerate healing of various tissues, reduce inflammation, and protect the gastrointestinal tract.

-  **ACCELERATES HEALING**
Enhances the repair of muscles, tendons, ligaments, and other soft tissues.
-  **REDUCES INFLAMMATION**
Helps modulate inflammatory response and reduces swelling.
-  **SUPPORTS GUT HEALTH**
Protects the gastrointestinal lining and supports gut integrity.
-  **IMPROVES RECOVERY**
May shorten recovery time from injuries and intense physical stress.

 **RESEARCH USE ONLY**

The administration of this product is not recommended without evaluation and guidance from a qualified healthcare professional.

OVERVIEW

BPC-157 has shown significant potential in preclinical studies for promoting angiogenesis, collagen synthesis, and tissue regeneration. It is also known to protect the gastric mucosa from damage caused by ulcers, NSAIDs, and stress.

BENEFITS

- Accelerates healing: Speeds up recovery of injured tissues.
- Reduces inflammation: Helps control inflammation and pain.
- Supports gut health: Protects and heals the gastrointestinal tract.
- Improves recovery: Enhances overall recovery and resilience.

POSSIBLE ADVERSE EFFECTS

- Mild injection site reaction: Redness or irritation.
- Headache or dizziness (rare).
- Nausea or mild gastrointestinal discomfort.
- Allergic reactions are rare but possible.
- Should be used under medical supervision.

ADVANCED SOLUTIONS

TB-500

TISSUE REPAIR & REGENERATION

TB-500 (Thymosin Beta-4) is a naturally occurring peptide that plays a key role in cell migration, tissue repair, angiogenesis, and inflammation regulation. It accelerates the healing process of muscles, tendons, ligaments, and other soft tissues.

ACCELERATES TISSUE HEALING

Promotes faster repair of muscles, tendons, ligaments and soft tissues.

ENHANCES ANGIOGENESIS

Supports the formation of new blood vessels for improved tissue nourishment.

REDUCES INFLAMMATION

Helps modulate inflammation and reduces post-injury swelling.

IMPROVES MOBILITY & PERFORMANCE

Restores function and flexibility, reducing recovery time and enhancing performance.

RESEARCH USE ONLY

The administration of this product is not recommended without evaluation and guidance from a qualified healthcare professional.

OVERVIEW

TB-500 is a 43-amino-acid peptide found in all human and animal cells. It has been shown to promote actin filament formation and cell migration, essential processes for tissue repair and regeneration. TB-500 is widely studied for its ability to accelerate recovery from injuries and support overall tissue health.

BENEFITS

- **Accelerates tissue healing:** Speeds up recovery of damaged tissues.
- **Enhances angiogenesis:** Supports new blood vessel formation.
- **Reduces inflammation:** Helps control inflammation and swelling.
- **Improves mobility & performance:** Restores function and reduces downtime.

POSSIBLE ADVERSE EFFECTS

- Mild injection site reaction: Redness, pain or swelling.
- Headache or dizziness.
- Nausea or mild gastrointestinal discomfort.
- Rare allergic reactions.
- Should be used under medical supervision.

ADVANCED SOLUTIONS

GHK-CU

COPPER PEPTIDE

GHK-Cu (Copper Tripeptide-1) is a naturally occurring peptide known for its powerful regenerative and anti-aging properties. It supports skin repair, collagen synthesis, and overall skin health, making it a key ingredient for tissue renewal and rejuvenation.

SUPPORTS SKIN REPAIR

Promotes cell regeneration and accelerates wound healing.

BOOSTS COLLAGEN & ELASTIN

Enhances collagen and elastin production for firmer, more youthful skin.

POWERFUL ANTIOXIDANT

Neutralizes free radicals and helps protect skin from oxidative stress.

IMPROVES SKIN HEALTH

Enhances skin tone, texture, and hydration for a radiant appearance.

RESEARCH USE ONLY

The administration of this product is not recommended without evaluation and guidance from a qualified healthcare professional.

OVERVIEW

GHK-Cu is a bioactive peptide that occurs naturally in human plasma, saliva, and urine. It plays an important role in tissue remodeling and has been extensively studied for its ability to promote healing, reduce inflammation, and improve skin appearance.

BENEFITS

- **Supports skin repair:** Accelerates wound healing and tissue regeneration.
- **Boosts collagen & elastin:** Improves skin firmness and elasticity.
- **Powerful antioxidant:** Protects against oxidative damage and aging.
- **Improves skin health:** Enhances tone, texture, and overall radiance.

POSSIBLE ADVERSE EFFECTS

- Mild redness or irritation at the application/injection site.
- Itching or sensitivity (rare).
- Temporary flushing.
- Headache (rare).
- Should be used under medical supervision.

ADVANCED SOLUTIONS

SS-31

(ELAMIPRETIDE)

MITOCHONDRIAL PROTECTIVE PEPTIDE

SS-31 is a synthetic tetrapeptide that selectively targets the inner mitochondrial membrane. It helps optimize mitochondrial function, improve cellular energy production, and protect against oxidative stress, supporting overall health, vitality, and longevity.

- **ENHANCES MITOCHONDRIAL FUNCTION**
Optimizes mitochondrial efficiency and supports healthy cellular respiration.
- **INCREASES ENERGY PRODUCTION**
Boosts ATP production for improved energy, stamina, and physical performance.
- **NEUROPROTECTIVE SUPPORT**
Helps protect neurons from oxidative stress and supports cognitive function.
- **CARDIOPROTECTIVE BENEFITS**
Supports heart health, improves vascular function, and enhances circulation.
- **SUPPORTS LONGEVITY & HEALTHSPAN**
Promotes cellular health, reduces oxidative damage, and supports healthy aging.

 **RESEARCH USE ONLY**

The administration of this product is not recommended without evaluation and guidance from a qualified healthcare professional.

OVERVIEW

SS-31 (Elamipretide) is a mitochondria-targeted peptide that binds to cardiolipin in the inner mitochondrial membrane. This interaction helps stabilize mitochondrial function, enhance energy production, and reduce the harmful effects of oxidative stress. SS-31 has been studied for its potential in supporting cardiovascular health, neuroprotection, athletic performance, and healthy aging.

BENEFITS

- **Enhances mitochondrial function:** Improves efficiency and stability.
- **Increases energy production:** Boosts ATP for better endurance.
- **Neuroprotective support:** Protects brain cells and supports cognition.
- **Cardioprotective benefits:** Supports heart health and circulation.
- **Supports longevity:** Reduces oxidative stress and promotes healthy aging.

POSSIBLE ADVERSE EFFECTS

- **Injection site reaction:** Redness, pain, or irritation.
- **Headache or dizziness.**
- **Nausea or mild gastrointestinal discomfort.**
- **Fatigue.**
- **Should be used under medical supervision.**

ADVANCED SOLUTIONS

KLOW

KISSPEPTIN-10

KLOW (Kisspeptin-10) is a potent peptide that stimulates the body's natural release of luteinizing hormone (LH) and follicle-stimulating hormone (FSH) by activating the hypothalamic-pituitary-gonadal (HPG) axis. It plays a key role in supporting hormonal balance, reproductive health, and overall vitality in both men and women.

STIMULATES NATURAL HORMONE RELEASE

Activates the HPG axis to increase LH and FSH production for optimal hormonal balance.

SUPPORTS REPRODUCTIVE HEALTH

Enhances fertility potential and supports sexual health in both men and women.

ENHANCES LIBIDO & VITALITY

Supports sexual desire, performance, and overall well-being.

HORMONAL BALANCE SUPPORT

Helps regulate key reproductive hormones for improved endocrine health.

ANTI-AGING & WELL-BEING

May support healthy aging, energy levels, and overall quality of life.

 **RESEARCH USE ONLY**

OVERVIEW

KLOW (Kisspeptin-10) works by directly stimulating kisspeptin receptors in the hypothalamus, leading to increased secretion of GnRH, which in turn promotes the release of LH and FSH from the pituitary gland. This helps regulate the reproductive hormone cascade, supporting fertility, libido, and overall hormonal health in both men and women.

BENEFITS

- Stimulates LH & FSH release: Supports natural hormone production.
- Supports reproductive health: Enhances fertility and gonadal function.
- Enhances libido & sexual health: Improves desire and performance.
- Promotes hormonal balance: Helps optimize endocrine function.
- Supports vitality & well-being: Enhances energy.

POSSIBLE ADVERSE EFFECTS

- Injection site reaction: Redness, pain, or irritation.
- Headache or dizziness.
- Nausea or mild gastrointestinal discomfort.
- Flushing or changes in mood.
- Hormonal fluctuations (rare).
- Should be used under medical supervision.

The administration of this product is not recommended without evaluation and guidance from a qualified healthcare professional.

ADVANCED SOLUTIONS

AOD-9604

ANTI-OBESITY DRUG - 9604

AOD-9604 is a modified fragment of human Growth Hormone (GH) designed to target and mobilize stored fat by stimulating lipolysis, without affecting blood sugar levels or interfering with GH receptor binding in other tissues. It is widely studied for its potential in fat loss, body composition improvement, and metabolic support.

TARGETS FAT STORES

Promotes the breakdown of stored fat by enhancing lipolysis.

SUPPORTS WEIGHT MANAGEMENT

Aids in reducing body fat while helping preserve lean muscle mass.

IMPROVES METABOLIC HEALTH

May support healthy lipid metabolism and overall metabolic function.

ENHANCES BODY COMPOSITION

Helps improve the ratio of lean mass to body fat.

WELL TOLERATED

Does not appear to affect blood sugar levels or GH levels.

RESEARCH USE ONLY

OVERVIEW

AOD-9604 is a 16 amino acid peptide derived from the C-terminus of human Growth Hormone. It has been shown to specifically stimulate the breakdown of triglycerides in adipose tissue, helping the body utilize fat for energy. It does not stimulate GH release and does not appear to affect blood sugar levels.

BENEFITS

- **Promotes fat loss:** Stimulates lipolysis and mobilizes stored fat.
- **Supports body composition:** Helps preserve lean muscle mass.
- **Improves metabolic health:** Supports healthy lipid metabolism.
- **Safe profile:** Does not affect blood sugar or GH levels.
- **Enhances performance:** May improve energy and physical performance during fat loss.

POSSIBLE ADVERSE EFFECTS

- Injection site reaction: Redness, pain, or irritation.
- Headache.
- Nausea.
- Fatigue.
- Dizziness.
- Should be used under medical supervision.

The administration of this product is not recommended without evaluation and guidance from a qualified healthcare professional.

ADVANCED SOLUTIONS

CJC-1295 WITH DAC

CJC-1295 with DAC is a long-acting growth hormone secretagogue that stimulates the pituitary gland to release growth hormone (GH) in a sustained and prolonged manner.

SUSTAINED GH RELEASE

Provides prolonged stimulation of growth hormone secretion.

ENHANCED RECOVERY & PERFORMANCE

Supports muscle recovery, endurance and physical performance.

FAT LOSS & BODY COMPOSITION

Promotes fat metabolism while preserving lean muscle mass.

OVERALL WELL-BEING

Improves sleep quality, energy levels, skin health and vitality.

RESEARCH USE ONLY

The administration of this product is not recommended without evaluation and guidance from a qualified healthcare professional.

OVERVIEW

CJC-1295 with DAC (Drug Affinity Complex) enhances the activity half-life of CJC-1295 by reducing its clearance rate, allowing for sustained stimulation of growth hormone release. This leads to improved body composition, recovery, sleep quality, and overall wellness.

BENEFITS

- **Sustained GH release:** Long-acting stimulation of growth hormone.
- **Enhanced recovery & performance:** Supports tissue repair, endurance and physical performance.
- **Fat loss & body composition:** Promotes lipolysis while preserving lean muscle mass.
- **Overall well-being:** Improves sleep quality, energy, skin health and vitality.

POSSIBLE ADVERSE EFFECTS

- Injection site reaction: Redness, pain or swelling.
- Headache or dizziness.
- Water retention or bloating.
- Nausea or mild gastrointestinal discomfort.
- Should be used under medical supervision.

ADVANCED SOLUTIONS

IGF-1 LR3

INSULIN-LIKE GROWTH FACTOR 1 LONG R3

IGF-1 LR3 is a potent analog of Insulin-Like Growth Factor 1 with a modified structure that extends its half-life, enhancing its stability and biological activity. It plays a key role in promoting growth, cell regeneration, muscle development, and overall recovery, making it a valuable tool for performance, anti-aging, and therapeutic applications.

PROMOTES CELL GROWTH & REGENERATION
Stimulates cell proliferation and tissue repair for improved recovery and healing.

ENHANCES MUSCLE GROWTH
Supports lean muscle mass development and strength gains.

IMPROVES RECOVERY & HEALING
Accelerates recovery time and supports faster tissue repair after injury.

ANTI-AGING & LONGEVITY SUPPORT
Supports healthy aging by promoting cellular function and reducing oxidative stress.

ENHANCES PERFORMANCE
Improves endurance, energy, and overall physical performance.

RESEARCH USE ONLY

The administration of this product is not recommended without evaluation and guidance from a qualified healthcare professional.

OVERVIEW

IGF-1 LR3 is a long-acting form of Insulin-Like Growth Factor 1, where an additional 13 amino acids are added to the N-terminus, extending its half-life and enhancing its stability. This modification allows for prolonged activity, leading to increased cell growth, muscle development, accelerated recovery, and overall tissue regeneration.

BENEFITS

- Promotes cell growth & regeneration: Supports tissue repair and healing.
- Enhances muscle growth: Increases lean muscle mass and strength.
- Improves recovery: Accelerates healing and reduces recovery time.
- Supports anti-aging: Promotes cellular health and longevity.
- Enhances performance: Improves endurance, energy, and vitality.

POSSIBLE ADVERSE EFFECTS

- Injection site reaction: Redness, pain, or irritation.
- Headache.
- Nausea.
- Joint or muscle discomfort.
- Water retention or edema.
- Should be used under medical supervision.

ADVANCED SOLUTIONS

GLOW

GROWTH HORMONE RELEASING PEPTIDE-6 (GHRP-6)

GLOW (GHRP-6) is a synthetic hexapeptide that stimulates the release of Growth Hormone (GH) by activating ghrelin receptors in the pituitary gland. It supports muscle growth, fat loss, recovery, and overall vitality while also enhancing appetite and improving sleep quality.

STIMULATES GROWTH HORMONE RELEASE

Promotes natural GH secretion, supporting growth, recovery, and tissue repair.

SUPPORTS MUSCLE GROWTH & STRENGTH

Enhances lean muscle mass, strength, and exercise performance.

AIDS FAT LOSS

Increases lipolysis and supports fat mobilization, especially when combined with proper diet and training.

IMPROVES SLEEP QUALITY

May enhance deep sleep patterns, supporting better recovery and well-being.

ENHANCES RECOVERY & WELL-BEING

Supports faster recovery, immune function, and overall vitality.

RESEARCH USE ONLY

OVERVIEW

GLOW (GHRP-6) is a Growth Hormone Releasing Peptide that stimulates the pituitary gland to release Growth Hormone (GH). It works by mimicking ghrelin, the body's natural hunger hormone, which also plays a key role in GH secretion, appetite regulation, and energy balance.

BENEFITS

- **Stimulates GH release:** Increases natural growth hormone levels.
- **Supports muscle growth:** Enhances lean mass and strength gains.
- **Aids fat loss:** Promotes fat metabolism and lipolysis.
- **Improves recovery:** Speeds up recovery and reduces downtime.
- **Improves sleep & well-being:** Supports deeper, more restful sleep.

POSSIBLE ADVERSE EFFECTS

- Increased appetite.
- Water retention or bloating.
- Tingling or numbness.
- Headache.
- Fatigue.
- Should be used under medical supervision.

The administration of this product is not recommended without evaluation and guidance from a qualified healthcare professional.

ADVANCED SOLUTIONS

MOSTS-C

MUSCLE, ORGAN, SKIN & TISSUE SYNTHESIS - C-TERMINAL FRAGMENT OF IGF-1

MOSTS-C is a bioactive peptide derived from the C-terminal region of Insulin-Like Growth Factor 1 (IGF-1). It has been shown to promote protein synthesis, tissue repair, and mitochondrial biogenesis without affecting glucose metabolism, making it a powerful tool for muscle growth, recovery, and overall regeneration.

- 

ENHANCES MUSCLE GROWTH
Stimulates protein synthesis and muscle cell proliferation for lean mass gains.
- 

SUPPORTS TISSUE REPAIR & REGENERATION
Promotes the repair of damaged tissues, accelerating recovery and healing.
- 

BOOSTS MITOCHONDRIAL FUNCTION
Enhances mitochondrial biogenesis and ATP production for improved energy and endurance.
- 

IMPROVES SKIN HEALTH
Supports collagen production, skin elasticity, and overall skin rejuvenation.
- 

ENHANCES RECOVERY & PERFORMANCE
Reduces muscle soreness and speeds up recovery for optimal performance.
- 

METABOLICALLY SAFE
Does not significantly affect blood sugar levels, offering a safer growth solution.

 **RESEARCH USE ONLY**

The administration of this product is not recommended without evaluation and guidance from a qualified healthcare professional.

OVERVIEW

MOSTS-C is a peptide fragment of IGF-1 consisting of the C-terminal sequence (70-89). It retains the anabolic and regenerative properties of IGF-1, including the ability to enhance muscle growth, tissue repair, and mitochondrial function, while minimizing the risk of unwanted metabolic effects.

BENEFITS

- Enhances muscle growth: Increases protein synthesis and lean mass.
- Supports tissue repair: Accelerates recovery from injuries and damage.
- Boosts mitochondrial function: Improves energy production and endurance.
- Improves skin health: Promotes collagen synthesis and skin rejuvenation.
- Enhances recovery: Reduces downtime and improves performance.
- Metabolically safe: Minimal impact on blood sugar levels.

POSSIBLE ADVERSE EFFECTS

- Injection site reaction: Redness, pain, or irritation.
- Headache.
- Nausea.
- Joint or muscle discomfort.
- Should be used under medical supervision.

ADVANCED SOLUTIONS

PT141

MELANOCORTIN PEPTIDE

PT-141 (also known as Bremelanotide) is a synthetic peptide analog of α -MSH (Melanocyte-Stimulating Hormone) designed to enhance sexual desire and arousal by selectively activating melanocortin receptors in the brain. It supports libido, sexual function, and arousal in both men and women.

-  **ENHANCES SEXUAL DESIRE & AROUSAL**
Stimulates melanocortin receptors to naturally increase libido and sexual arousal.
-  **IMPROVES SEXUAL FUNCTION**
May improve erectile function in men and sexual responsiveness in women.
-  **SUPPORTS MOOD & WELL-BEING**
Can promote a sense of well-being and confidence through improved sexual health.
-  **FAST ACTING**
Works quickly after injection with effects typically within 30-90 minutes.
-  **WELL TOLERATED**
Generally well tolerated with a low incidence of adverse effects when used as directed.

 **RESEARCH USE ONLY**

The administration of this product is not recommended without evaluation and guidance from a qualified healthcare professional.

OVERVIEW

PT-141 is a synthetic peptide that binds to melanocortin receptors in the central nervous system, particularly MC3 and MC4 receptors. By doing so, it modulates pathways involved in sexual behavior, increasing libido and facilitating sexual arousal in both men and women.

BENEFITS

- Enhances libido: Increases sexual desire naturally.
- Improves arousal: Facilitates arousal and sexual responsiveness.
- Supports sexual performance: May improve erectile function.
- Enhances mood: Promotes well-being and confidence.
- Works for both men & women: Supports sexual health across genders.

POSSIBLE ADVERSE EFFECTS

- Nausea
- Flushing
- Headache
- Injection site reactions
- Fatigue
- Increased blood pressure (rare)
- Should be used under medical supervision.

ADVANCED SOLUTIONS

SLUP-PP

SLEEP SUPPORT PEPTIDE

SLUP-PP (sleep inducing peptide, proline-proline) is a tetrapeptide that promotes natural, deep sleep by targeting sleep regulation pathways in the brain without the grogginess associated with traditional sleep aids. It helps improve sleep quality, reduce time to fall asleep, and enhance overall recovery and well-being.

PROMOTES RESTFUL SLEEP

May reduce time to fall asleep and increase total sleep time.

IMPROVES SLEEP QUALITY

Supports deeper stages of sleep and reduces nighttime awakenings.

REDUCES STRESS & ANXIETY

Helps calm the nervous system and promotes relaxation.

ENHANCES RECOVERY

Supports physical and mental recovery through better, uninterrupted sleep.

NON-HABIT FORMING

Does not cause dependency or next-day drowsiness.

RESEARCH USE ONLY

OVERVIEW

SLUP-PP is a synthetic tetrapeptide (Ser-Leu-Pro-Pro) that has been shown to promote natural sleep by modulating sleep-regulating neural pathways. It helps improve sleep latency, duration, and overall sleep quality without the sedative side effects of traditional medications.

BENEFITS

- Promotes natural, deep, and restorative sleep
- Reduces time to fall asleep
- Increases total sleep duration
- Improves sleep quality and reduces nighttime awakenings
- Supports recovery, mood, and cognitive function
- Non-habit forming with no next-day grogginess

POSSIBLE ADVERSE EFFECTS

- Mild headache
- Nausea
- Vivid dreams (rare)
- Dizziness (rare)
- Injection site reaction
- Should be used under medical supervision.

The administration of this product is not recommended without evaluation and guidance from a qualified healthcare professional.

IMPORT PROCESS TO BRAZIL

Understand the step-by-step process for legally importing research products into **Brazil**.

1

MEDICAL CONSULTATION

📍 Avaliação com profissional habilitado.

Medical evaluation and issuance of a prescription containing all information required for the import process.

2

MEDICAL REPORT

📍 Relatório médico.

Document containing diagnosis, clinical justification, therapeutic indication and explanation of the need for the requested product.

3

ONLINE REQUEST

📍 Solicitação eletrônica.

Submit the import request through the official Brazilian Government and ANVISA portal.

4

ANVISA REVIEW

📍 Análise regulatória.

Documentation review by ANVISA. Once approved, the Import Authorization is issued according to current regulations.

5

PURCHASE & IMPORT

📍 Compra e importação.

After authorization approval, the product may be purchased and legally imported following Brazilian regulations.

All processes must comply with **Brazilian laws** and current regulations.

JOURNEY OF SHIPPING TO BRAZIL

Understand how the **step-by-step** process of sending medications to Brazil works.

InterX do Brasil operates as the central link that unites the doctor, the US exporter, and the Brazilian importer. Nothing moves alone: InterX conducts, validates, coordinates, and ensures end-to-end compliance.

Next, the fully restructured and enriched process:

1

MEDICAL INDICATION & CLINICAL VALIDATION (BRAZIL → USA)

The process begins in the office, but InterX do Brasil connects all the points.

1. The patient receives a medical indication for a specific treatment.
2. The patient or doctor sends the prescription to InterX.
3. InterX reviews the documentary requirements and sends the request to InterX USA (partner exporter).

HIGHLIGHT: InterX do Brasil acts as a regulatory interpreter, ensuring the request aligns with Brazilian requirements (ANVISA) and US export documentation.

2

QUOTATION, PAYMENT, AND FINANCIAL STRUCTURE (INTERX AS FACILITATOR)

InterX do Brasil centralizes the entire financial flow between the importer and the US exporter, ensuring security, traceability, and regulatory compliance.

- InterX do Brasil requests the quotation from the US exporter based on the validated prescription.
- InterX presents the final value to the importer, including product, international logistics, operational costs, and any fees.
- Payment is made by the importer directly to InterX Brasil, which acts as an authorized financial intermediary.
- InterX forwards the amounts to the US exporter, according to the modal chosen by the importer:
 - Full prepayment (before production/shipment);
 - Partial prepayment (down payment + balance in biosphase);
 - Payment against delivery of the medication (when previously agreed between the parties).

This flexible mechanism allows meeting different cash flow needs, mitigating risks for both parties, and accelerating production start when necessary.

REINFORCEMENT: InterX conducts this entire process as a financial and operational intermediary, ensuring the exporter and importer have security, predictability, and clarity at every step.

3

PREPARATION, DOCUMENT ISSUANCE & COMPLIANCE (USA → BRAZIL, UNDER INTERX COORDINATION)

The exporter generates the documents — but InterX defines, requests, and validates each piece before shipment.

Documents typically include:

- Commercial invoice
- ANVISA declarations
- Packing list
- Specific licenses according to the product
- MSDS (if applicable)

InterX accompanies, reviews, and approves everything before export.

CRITICAL HIGHLIGHT: Nothing is sent to the USA without InterX Brazil's review. InterX's role is to shield the client against documentary errors, the #1 cause of customs retention.
